

JSS TALENT CHECK

Assessment 2 — Student Instructions

TalenciaGlobal | TalHelix Portal | JSS University — Read Fully Before Your Assessment

For Assessment 1 Qualified Candidates. You have qualified from Assessment 1 and are eligible for this next round. This is a longer, more advanced assessment — read every instruction carefully.

MANDATORY ASSESSMENT: This assessment is mandatory for all qualified students. If you are absent or late, you will NOT be allowed to take the assessment that day, and this will directly impact your future placement opportunities. Further action in such cases will be decided by the university.

1. Slot, Reporting & Duration

Time Slot	Reporting Time	Total Duration
9:00 AM – 1:00 PM	9:00 AM	4 hours

- Your building (Academic Block), lab room and seat number have already been shared with you. Report exactly there.
- **Reporting time is 9:00 AM. Arrive on time.**
- **If you arrive even one minute late, you will NOT be marked present and will NOT be allowed to take the assessment.**
- **Sit ONLY on the seat number allocated to you. Sitting on someone else's seat is treated as malpractice and can lead to disqualification.**

2. Assessment Composition

The assessment has two parts, to be completed within the total duration of 3 Hours:

Part	Contents	Time
Coding	5 questions — OOPs, Arrays, Stacks & Queues, Linked List, Binary Trees	120 mins
Technical Comprehension & Reasoning (TCR)	SQL + OOPs + FSD (Full-Stack Development)	60 mins

Coding question topics: Object-Oriented Programming (OOPs), Arrays, Stacks & Queues, Linked List, Binary Trees

Manage your time across both parts. Plan to leave enough time for the 60-minute TCR section.

Technical Comprehension & Reasoning (TCR)

TCR is a 60-minute section that tests not just what you know, but how well you understand it. Unlike a standard multiple-choice test, TCR evaluates your reasoning alongside your answer.

For each question, you will:

1. Read the technical question carefully (topics: SQL, OOPs and Full-Stack Development).
2. Select the correct option from the multiple choices provided.
3. Write your reasoning — a clear, concise explanation of *why* your chosen answer is correct.

How you are scored: Your score is based on both the *correctness* of the option you select **and** the *quality of your reasoning*. A correct answer with strong, logical reasoning scores highest. Simply guessing the right option without sound reasoning will not earn full marks — so always explain your thinking clearly.

SNAPSHOT FOR TCR – QUESTIONS NAVIGATION, REASONING

Q10 EASY Single Choice 1 marks

What is a Jenkins Pipeline?

☐ Container

☐ Repository

☒ CI/CD workflow

☐ VM

Skip - I'm unsure

Reasoning * explain why you chose this answer — min 10 characters

A Jenkins Pipeline is a set of automated steps defined in Jenkins to build, test, and deploy software. It represents the CI/CD workflow, automating the software delivery process from code changes through deployment.

A Kubernetes application is healthy internally, but users report they cannot access it externally. Pods are running and passing readiness checks. What should be investigated first?

☐ Service and Ingress configuration

☐ Delete and recreate all pods

☐ Upgrade Kubernetes cluster version

☐ Increase node CPU allocation

Skip - I'm unsure

Reasoning * explain why you chose this answer — min 10 characters

QUESTIONS				
Current	Answered	Flagged	Unanswered	
1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20
21	22	23	24	25
26	27	28	29	30
31	32	33	34	35
36	37	38	39	40
41	42	43	44	45
46	47	48	49	50
51	52	53	54	55
56	57	58	59	60

Tips:

- **Keep your reasoning focused and to the point** — explain the concept, not just restate the answer.
- **Manage your time:** with limited minutes per question, don't over-write. A few clear sentences are enough.
- **Attempt every question.** Even if unsure of the option, well-structured reasoning demonstrates your understanding.

3. What to Bring / What Not to Bring

- **Bring:** your University ID card — it must be pinned/worn and visible throughout the assessment.
- **NOT allowed:** mobile phones, laptops, smartwatches, wearables, earphones or any other electronic device at your seat.

4. Logging In

The login steps and details (portal link, username and password) will be shared by your faculty coordinators in the morning, at your lab, before the assessment begins. Simply follow their instructions.

5. Starting the Assessment (Safe Exam Browser)

1. Log in to the portal → go to the "Available" tab → open your assessment.
2. Click Start Assessment → click "Launch Exam in Safe Exam Browser (SEB)".
3. The SEB window opens and locks your screen to the exam. Re-enter your email ID and password, then start the assessment.

6. Attempting the Questions

- The coding part has 5 questions. You may choose any question to attempt first.
- Once you start a question, you must complete it before moving to the next one.
- **A completed question gets LOCKED — you cannot go back and change it. Choose your order carefully.**
- Run attempts are limited. The count of remaining runs is shown at the top.
- **Usable runs = Total runs – 1. The LAST run is reserved for your final submission — plan your runs.**
- **Submit the coding Assessment and Start the TCR Assessment**
- The TCR part (SQL + OOPs + FSD) is a separate 60-minute section. Follow the on-screen and coordinator guidance for moving into it.

7. If Something Goes Wrong — DO NOT PANIC

- **Your progress is saved automatically at every step. Power cuts, network drops or errors will NEVER cause loss of your work.**
- If you see "Failed to fetch", a frozen screen, a blank page or a submission error: wait 10–20 seconds and retry ONCE. Do not click Run/Submit repeatedly.
- If the issue continues, raise your hand and inform the invigilator. Clearly describe what you were doing and any error you saw.
- **NEVER try to close or force-quit SEB yourself. Only the invigilator can exit SEB using a secure password, after which you can log in again and resume exactly where you left off.**
- Personal mobile hotspot may be used only if the invigilator permits it.
- Time lost to genuine technical issues is tracked and will be accounted for.

8. Finishing the Assessment

1. Ensure you have completed and submitted both parts (Coding and TCR) before the end of your slot (1:00 PM).
2. SUBMIT your assessment, then exit Safe Exam Browser when your coordinator announces the exit step.
3. Do not leave your seat before submitting and exiting SEB. Leaving without submitting/exiting will be treated as a violation and may invalidate your attempt.

9. Malpractice Policy

Any student found engaging in malpractice — including using prohibited devices, sitting on another student's seat, impersonation, or attempting to access the assessment outside the exam hall — will have their attempt disqualified (not considered), and necessary action will be taken by the university.

10. What You Should Prepare

This is an advanced round. Focus your preparation on: Object-Oriented Programming (OOPs) concepts, Arrays, Stacks & Queues, Linked Lists and Binary Trees for the coding part; and SQL, OOPs and Full-Stack Development (FSD) for the TCR part. You may code in C++, Java or Python.
